

How to use the app:

The score at the top is your current streak of correct guesses and the high score at the top is the highest streak you have earned. You should press the “Start” button to generate a new word and should press the “Guess” button to see if the word you typed matches the word you need to guess. Each box will contain 1 letter of a 5 letter word, you have 6 tries to guess the randomly generated 5 letter word. Type a letter in each of the 5 boxes for each guess and then click the guess button to see if that guess is correct.

If the box turns green that means the letter is in the correct place, if the box turns yellow that means that letter is in the word but it's in the wrong place, if the box turns red that means the letter is not in the word.

Key Features:

1. Keep track of your current score (number of correct guesses in a row)
2. Saves high score even if you close the app
3. Prevents user from typing too many or too little letters for each guess, and prevents user from typing words that are not on the wordle list
4. Indicates whether or not letter is in the correct place (green), wrong place (red) or if the letter is in the word but in the wrong place (yellow)
5. Infinite number of tries, each trail will pick a random wordle word for the user to guess
